

# Soft Plastic Packaging Scheme Waste Expo Melbourne 26 Oct 23

Helen Millicer, Director, One Planet Consulting on behalf of Barry Cosier, Director – Sustainability, AFGC

Sustaining Australia

## Intro to National Plastics Recycling Scheme (NPRS)

- What is NPRS and what's been done to date
- Trials of what and where
- MRF audit results
- Household survey results
- Who's involved
- Next steps

## What is the NPRS?

A product stewardship scheme to stimulate soft plastic recycling where a market failure exists

Brand and retailer levy directly invested into the recycling value chain, to drive:

- √ robust end markets
- ✓ trust and transparency
- sustainable packaging design through eco-modulation
- √ circular economy

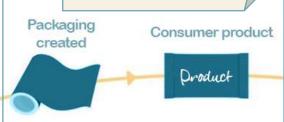

## What is the NPRS?

A product stewardship scheme to stimulate soft plastic recycling where a market failure exists

3 Aims:

Incentivise sustainable packaging design (recyclability and PCR)

AUSTRALIAN FOOD & GROCERY COUNCIL

A circular economy for soft plastic packaging

Increase the availability of food/pharma grade recycled content

Process to film

Food grade plastic pellets

Increase the recycling rate

Sustaining Australia

## What has been achieved to date?

**Foundation Phase** 

**Pre-Commercialisation Phase** 

**Commercialisation Phase** 

#### **Business case phase**

- ✓ Cost benefit analysis
- ✓ End markets identified
- ✓ Draft material and monetary flows
- ✓ Draft financial and op's model

#### Scheme design phase

- ✓ Global best practice review
- ✓ Scheme design drafted
- ✓ Governance documents drafted

#### **Implementation**

- ✓ Brand owner funding
- ✓ Collection trials

#### **Review phase**

- ✓ Model review
- ✓ Trials review

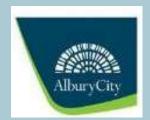

Sustaining Australia

## The first Trials | what we did

- Program trials collected soft plastics in 8,250 households, 6 councils, 3 states
- 4 different bag types, different colours and designs
- November 2022 to March 2023 (data and reporting point) and through 2023
- Household participant survey to measure lived experience

## SUPPORTERS OF SOFT PLASTIC RECYCLING

#### **Trial Partners**

## **NPRS Collection Trial Review**

A review of audits and data

25<sup>th</sup> September 2023

## **Background**

#### MRA Consulting Group

#### **NPRS Collection Trial**

- November 2022 September 2023
- ~32,000 households

#### Ongoing program

Councils	Albury	Wodonga	Macedon Ranges	Charles Sturt	Port Adelaide Enfield	City of Adelaide	Newcastle	Central Coast
Opt-in or designated	Designated	Designated	Designated	Designated	Designated	Opt-in	Opt-in	Opt-in

MRF	Cleanaway MRF Albury, NSW		APR MRF Truganina, VIC	CAWRA MRF Kilburn, SA			iQ Renew MRF Somersby, NSW	

- MRA scope:
  - Audited 3 MRF process flows
  - Bag conditions from 4 MRFs
  - Reviewed other data from EC Sustainable, Qenos and multiple Councils.

#### **NPRS Trial Data**

#### Scope: operations involving material coming into and out of MRFs

Households in Trial Councils

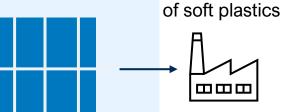

A) Inbound

B) Sorting

C) Outbound

- Household surveysCouncils
- Bin audits (inbound contamination) –
   Councils
- Bag weights Councils, Qenos, EC Sustainable
- Bag condition audits MRA, EC Sustainable
- MRF sorting audits MRA, EC Sustainable
- Bale audits EC
   Sustainable

 Bag composition audits – Qenos

Re-processors

## **Material flows**

B) Sorting capacity

#### **Material flows**

B) Sorting – where else do the bags go in the MRF?

If you don't have a pre-sort, 75% of bags travel over the ballistic separator to cardboard, 17% roll back to plastic, 2% fall through to paper

#### NPRS Collection Trial Review – Questions to answer

Scope: operations involving material coming into and out of MRFs

Households in participating Councils

Household survey

A) Inbound

- 1. How many households participated?
- 2. How much did they put in the bin (kg)?
- 3. How much contamination was in the bags (%)?
- 4. Did the bags break (%)?
- 5. Did glass in the bin impact the bags?
- 6. Was inbound material contaminated?

B) Sorting

- 7. How effectively were the bags sorted in the MRF?
- 8. What happens when participation increases?
- 9. Where do missed bags go and do they burst?
- 10. Can bags be extracted at these locations?

C) Outbound

11. What was the impact on the quality of other streams?

Re-processors of soft plastics

Recyclability analysis Qenos Lab

#### **Conclusions**

#### Can MRFs capture bags efficiently?

#### A) Inbound

- MRFs are an effective way to collect soft plastics from households.
- Bagged soft plastics had little effect on **inbound quality** (yellow bin) (EC Sustainable data):
  - Control = 1.82%
  - Trial = 1.97%
- Results are improved with a thicker gauge bag (<50uM)</li>

#### B) Sorting

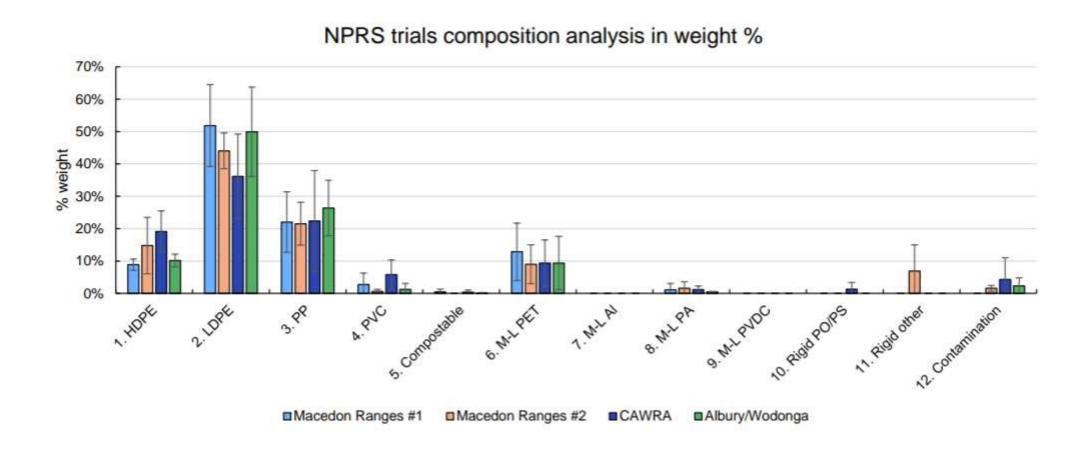

- Without pre-sort, majority of bags go to cardboard. Bursting and leakage increases as bags go through MRF equipment.
  - Therefore, pre-sort is preferred.
- Requires upgrades to operations: labour (1-4 people depending on MRF size) or equipment (e.g. robot)

#### C) Outbound

- Bagged soft plastics had little effect on outbound cardboard quality (EC Sustainable data):
  - Control = 0.2% soft plastic
  - Trial = 0.3% soft plastic

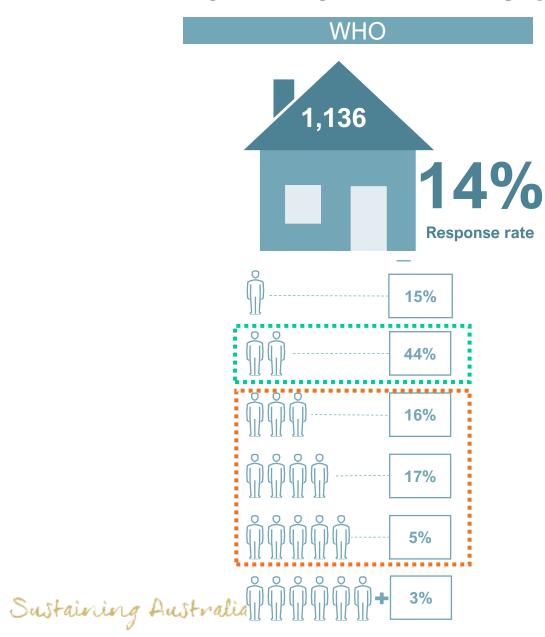

## What's in the bag? Qenos Laboratory, March '23 Satisfactory household contents, room for improved design

## Household participant survey | key stats March '23

# 5.5 bags per household 50% fortnightly disposal

**HOW** 

WHY

**55%**Convenience

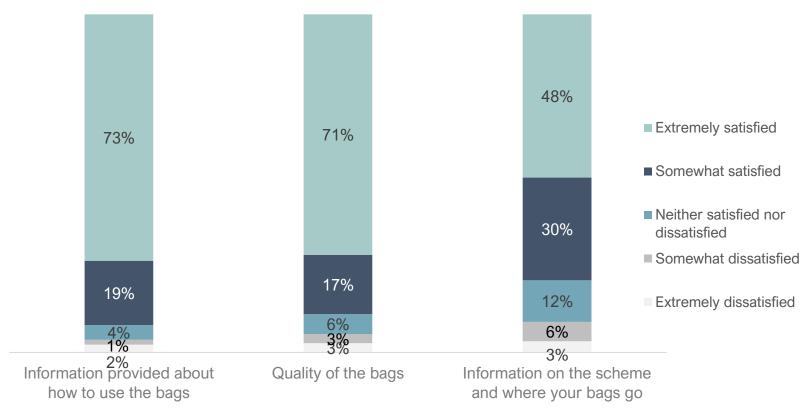

**53%**Recycling more soft plastics than before

## The Household User Experience

## +90% user satisfaction drives individual engagement & altruistic ambition for the program to go broader & make a bigger impact

% satisfied or dissatisfied with the following aspects of the kerbside plastic scheme

## The Key Insight Recruitment of non-recyclers is proven

Convenience of at-home solution drives adoption & satisfaction

50%

were REDCycle frequents

10%

were REDCycle infrequents

1 in 3

were REDCycle non users

50%

increase in household penetration achieved

## **Next Steps**

#### **Foundation Phase**

#### **Completed:**

- ✓ Business case
- ✓ Cost benefit analysis
- ✓ Global best practice review
- ✓ Scheme design drafted
- ✓ Governance arrangements drafted
- ✓ Collection trials
- ✓ End markets identified
- ✓ Draft material and monetary flows
- ✓ Brand funding
- ✓ Initial financial and operational modelling complete
- ✓ Critical review of progress to date complete

**Pre-Commercialisation Phase** 

**Commercialisation Phase** 

NFP entity establishment and recruitment

Return to store end markets, pilots and scale up

Behavioural research

Bag design standards

Traceability pilot

Refined collection and MRF pilot

RFI and model finalisation

Tenders & contracting\*

Construction

Collections

## Scheme design features

#### Bringing global best practice stewardship to Australia

- ✓ Independent NFP entity
- ✓ Representative board
- ✓ Advisory board Whole of supply chain
- ✓ Brand owner levy:
  - ✓ **Reduce:** \$/T placed on market
  - ✓ Recyclability: Ecomodulated fee on packaging design APCO/Ceflex guidelines
  - √ \$Incentive for post-consumer recycled content %)
  - ✓ Invested in end market development and gaps in supply chain (hypothecation)
- ✓ Direct investment in infrastructure
- ✓ Brand's levies get invested in the value chain
- ✓ Long term stable governance
- ✓ Trust
  - ✓ Transparency and accountability
  - ✓ Traceability

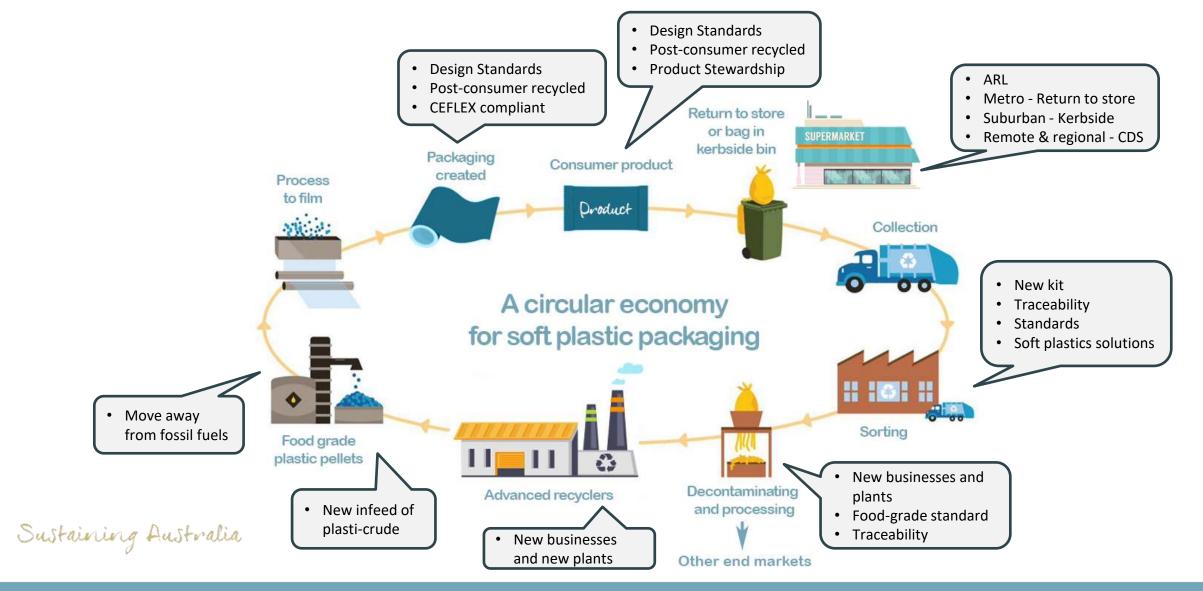

#### **Completed:**

- ✓ Business case
- ✓ Cost benefit analysis
- ✓ Global best practice review
- ✓ Scheme design drafted
- ✓ Governance arrangements drafted
- ✓ Collection trials
- ✓ End markets identified.
- Draft material and monetary flows
- ✓ Brand funding
- ✓ Initial financial and operational modelling complete
- Critical review of progress to date complete
